Problem Solving

Leetcode: 150+ | Link
beecrowd Online Judge: 155+ | Link
Other Online Judge: 100+ | link 1 link 2 link 3 link4

Participated in **Daffodil International University** programming contest fall 2017 & got selected as on of the top 20 participants for Advanced Programming Bootcamp. I also participated in **ACM-ICPC** Dhaka regional preliminary contest 2018 and 2019.

Featured Project - Amazona   Live   Server   Client

Bootstrap React Node Express MongoDB Mongoose JWT Braintree

This project is a fully functional, full stack e-commerce web app based on MERN. Here User can order watch products, filter products based on categories, featured, recent arrival, discount, price, related products, sold etc. They can add products to cart, can remove, can increase order quantity and many more but for checkout user must be logged in.

Major Features
- ✓ Implemented Login/Sign in and Register system using JWT.
- ✓ Performed React-Router v6 to ensure the Private & admin routes.
- ✓ Developed admin dashboard where admin can CRUD products, Track Products current status, Every single order detail, History of Orders and many more options.
- ✓ Developed User dashboard where user can update his profile, can watch his purchase History.
- ✓ Payment method is added.

Major Challenges
- Making the relationship between Different Database Model.
- Add payment method
- Authentication and Security.
